

okm[®]decoration

Endless variety of designs
to customize orthosis,
prothesis or seats

OKM was born in 2000 as a result of the cooperation between technical and professional orthopedic companies of the chemical and polyurethane industry. The objective was to create a value proposal towards the orthopedic sector with specialized solutions for the increasingly demanding sector necessities.

Currently, our exports reach more than 50 countries and among our customers we are pleased to collaborate with the most important and experienced companies in each country.

OKM nació el año 2000 con el objetivo de desarrollar productos nuevos y aplicaciones químicas del poliuretano en el sector de la ortopedia técnica. La evolución y el crecimiento han hecho de OKM una empresa líder en soluciones técnicas ortopédicas de máxima calidad que se adaptan a las necesidades de los profesionales a la vez que mejoran la calidad de vida de los pacientes.

Nuestras exportaciones se extienden a más de 50 países y, entre nuestros clientes, tenemos el placer de trabajar con los centros ortopédicos más importantes y experimentados del mundo.

OKM est née en 2000, fruit de la collaboration entre des entreprises du secteur orthopédique, de l'industrie chimique et du polyuréthane. L'objectif était de pouvoir proposer des solutions spécialisées aux besoins chaque jour plus exigeants du secteur orthopédique.

Actuellement nous exportons dans plus de 50 pays et nous avons parmi nos clients les sociétés les plus importantes dans chaque pays.

We export to more than 50 countries

Transfer Papers

Customized

Our transfer papers are manufactured by OKM. We offer an extended range of colors and designs specially created for orthopedic application. We present new designs each year and create custom made designs depending on your specific needs.

Designs are created to optimize at best the technicians work. We offer rounded and multidirectional images to avoid positioning mistakes on the plastic. All our papers can be used with all orthosis plastics. For a maximal security apply our demolding spray on the plastics before putting them in the oven.

All our designs can be manufactured in transfer paper and decorative fabric.

Los papeles transfer de nuestro catálogo son fabricados en OKM y nuestra propuesta destaca por la gran variedad de colores y formas diseñados específicamente para la aplicación ortopédica. Lanzamos colecciones nuevas cada año y ofrecemos el servicio de personalización de cualquier temática. Los diseños buscan optimizar al máximo el trabajo del técnico, trabajando con formas curvilíneas y con elementos multidireccionales así evitar errores de colocación del papel sobre el plástico. Todos nuestros papeles son aptos para trabajar con todos los plásticos ortésicos. Para una mayor seguridad, recomendamos utilizar el espray desmoldeante antes sobre el plástico antes de ser horneado. Todos los diseños del catálogo pueden fabricarse en papel transfer o en tela decorativa.

Les papiers Transferts présentés dans notre catalogue sont fabriqués par OKM. Nous proposons une large variété de couleurs et motifs créés spécialement pour l'application orthopédique. Nous sortons des nouveautés chaque année et proposons également le service de motif personnalisé pour faire face à toutes vos demandes. Les motifs sont conçus pour optimiser au maximum le travail des techniciens. Nous proposons des formes courbées et des éléments multi directionnels afin d'éviter des erreurs de positionnement sur le plastique. Tous nos papiers peuvent être utilisés avec tous les plastiques pour orthèses. Pour une sécurité maximale nous vous conseillons d'appliquer notre spray démoulant sur les plastiques avant de les passer au four. Tous les motifs du catalogue peuvent être fabriqués en tissu décoratif.

Customized

Decorative fabrics are specially manufactured for socket decoration during the lamination process. The fabric offers a perfect elasticity and adapts to any mold without deforming the design. Decorative fabrics are available in lineal meters (1600 mm wide), femoral tubular (200 mm wide) and tibia tubular (150 mm wide). All our designs can be manufactured in transfer paper and decorative fabric.

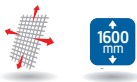

Las telas decorativas están especialmente destinadas a la decoración de encajes protésicos a través de la técnica de laminación. El tejido ofrece una elasticidad suficiente como para ser adaptada fácilmente a cualquier tipo de molde evitando que el dibujo sea deformado. Los formatos son en mantas de 1600 mm de ancho o en tubulares femorales (200 mm de ancho) o tibiales (150 mm de ancho). Todos los diseños del catálogo pueden fabricarse en papel transfer o en tela decorativa.

Les tissus décoratifs sont spécialement destinés à la décoration d'emboîtures à travers la technique de lamination. Le tissu offre une élasticité parfaite qui s'adapte facilement à toutes les formes de moule évitant la déformation de l'image. Les formats disponibles sont en mètres linéaires de 1600 mm de large, tubulaires fémoraux (200 mm de large) et tibiaux (150 mm de large). Tous les motifs du catalogue peuvent être fabriqués en tissu décoratif.

Flex Neo Cover

Nextt's Neo cover has a flexible structure and is made in 3D printing. Flexible covers are the ideal solution to avoid breaking the rigid structures that protect the prosthesis in the lower limb. Neo by Nextt is a waterproof cover with an innovative closure system with invisible magnets, has an anti-rotation design and is available in three colors: black, red and skin. The internal and external design is customized and is suitable for any transtibial or transfemoral prosthesis.

El cover Neo de Nextt tiene una estructura flexible y está fabricado en impresión 3D. Los covers flexibles son la solución ideal para evitar las roturas de las estructuras rígidas que protegen la prótesis en la extremidad inferior. Neo de Nextt es un cover resistente al agua con un innovador sistema de cierre con imanes invisibles, tiene un diseño antirotación y está presente en tres colores: negro, rojo y piel. El diseño interno y externo es personalizado y es apto para cualquier prótesis transtibial o transfemoral.

Le cover Neo de Nextt a une structure flexible et est réalisée en impression 3D. Les covers souples sont la solution idéale pour éviter de casser les structures rigides qui protègent la prothèse du membre inférieur. Neo by Nextt est un cover imperméable avec un système de fermeture innovant avec des aimants invisibles, a un design anti-rotation et est disponible en trois couleurs: noir, rouge et peau. Le design intern et extern est personnalisée et convient à toute prothèse transtibiale ou transfemorale.
